REPOSITORY ANALYTICS REPORT

vuejs/core

[U+1F596] Vue.js is a progressive, incrementally-adoptable JavaScript framework for building UI on the web.

https://github.com/vuejs/core
Analysis snapshot completed: Nov 09, 2026 07:46 UTC

Overview retrieved: Nov 09, 2026 07:46 UTC

Snapshot ID: 2d482b59-ad80-40cc-8f76-f9f13d4c79c6

Independent GitHub snapshots with explicit coverage limits. This report is not a repository ranking or an objective source-code quality assessment.

Statistic	GitHub-reported value
Stars	54,872
Forks	9,284
Open issues + pull requests	964
Subscribers	759
Repository size	48,562 KB

Repository detail	Value
Owner	vuejs
Default branch	main
Created	Jun 12, 2018 13:49 UTC
Last push	Nov 09, 2026 07:07 UTC
Primary language	TypeScript
Detected license	MIT License

The combined open count above includes pull requests. Unknown optional metadata is omitted, never replaced with zero.

Language analytics

Total detected language bytes: 4,836,836

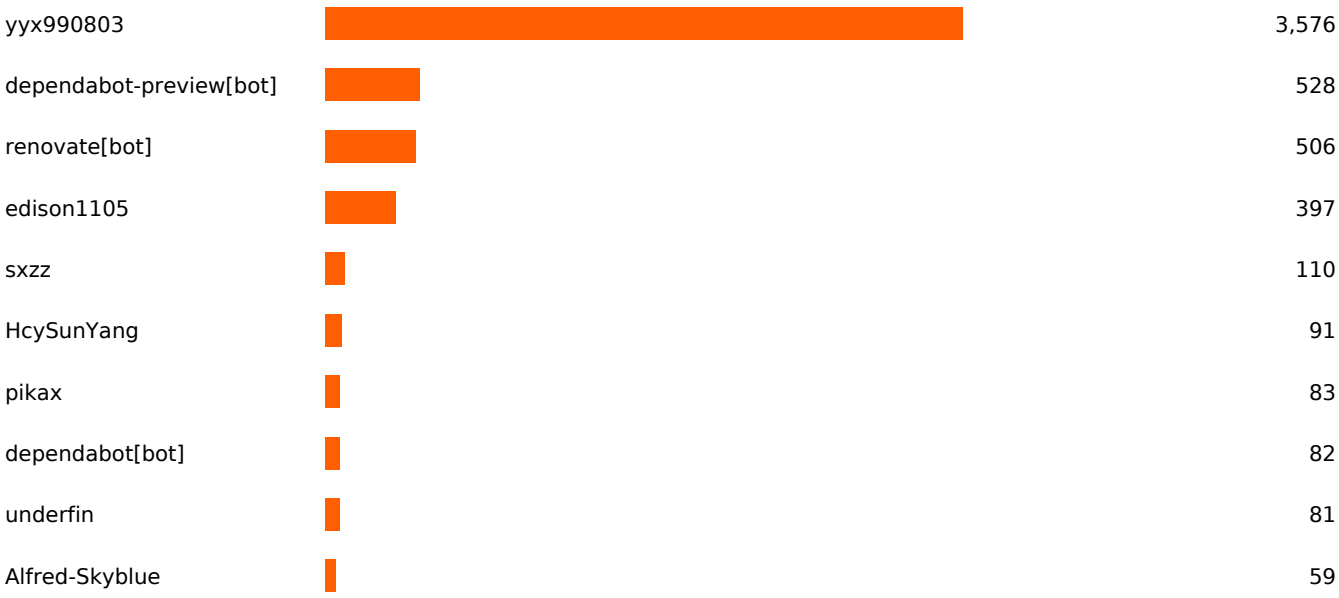

Chart: up to 10 largest detected languages. The table preserves all returned language byte counts.

Language	Detected bytes	Share
TypeScript	4,689,067	96.94%
JavaScript	74,949	1.55%
HTML	51,019	1.05%
Vue	20,432	0.42%
CSS	1,369	0.03%

Contributor sample

First page only: up to 10 GitHub-ranked contributors. This is not the total contributor population. Anonymous contributors are excluded; GitHub may cache these counts.

Rank	GitHub profile	Contributions
1	yyx990803	3,576
2	dependabot-preview[bot]	528
3	renovate[bot]	506
4	edison1105	397
5	sxzz	110
6	HcySunYang	91
7	pikax	83
8	dependabot[bot]	82
9	underfin	81
10	Alfred-Skyblue	59

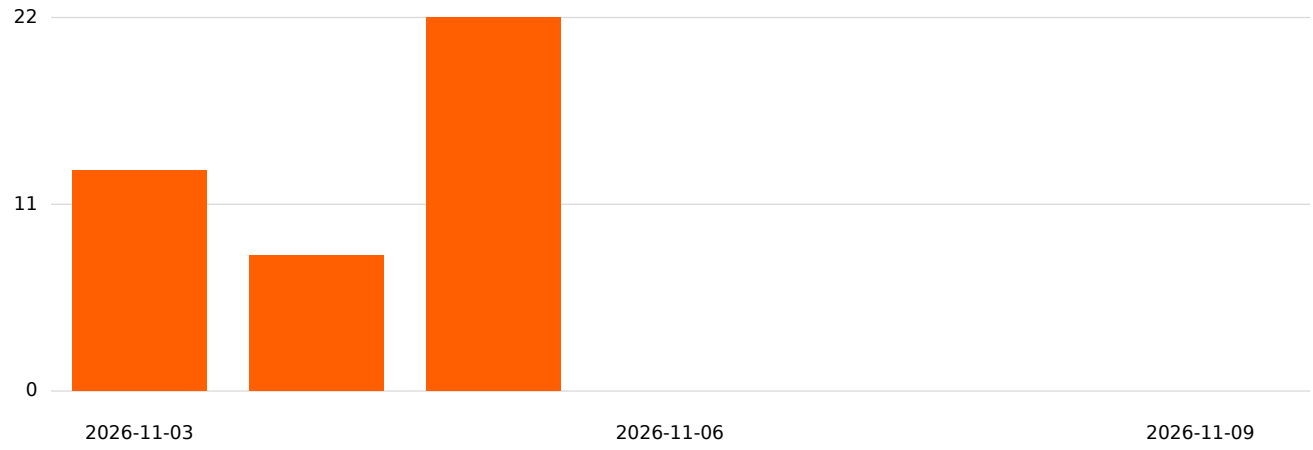

Additional pages reported: yes. Returned contributors are not the complete contributor population.

Commit activity

All 43 commits returned for the selected UTC window on the pinned default branch. Activity uses committer timestamps and includes merge commits. Today is a partial day.

Selected UTC window: Nov 03, 2026 00:00 UTC to Nov 09, 2026 07:46 UTC. Fetched unique commits: 43.

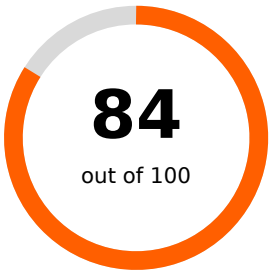

Recent 10 of 43 fetched commits; not all-time history. Long subjects are shortened; full messages are linked on GitHub.

Commit	Message / author	Committed (UTC)
8b479a8944	release: v3.5.45 Author: daiwei	Nov 05, 2026 09:10 UTC
9f9b71c5c9	chore(deps): bump source-map-js from 1.2.1 to 1.2.2 (#16150) Author: dependabot[bot]	Nov 05, 2026 08:34 UTC
1d718d2ecb	chore(deps): update dependency @types/node to v26 (#16087) Author: renovate[bot]	Nov 05, 2026 08:31 UTC
68583ce9f3	chore(deps): bump undici from 8.9.0 to 8.12.3 (#16149) Author: dependabot[bot]	Nov 05, 2026 08:30 UTC
91f2625af2	chore(deps): bump fast-uri from 3.1.0 to 3.1.9 (#16148) Author: dependabot[bot]	Nov 05, 2026 08:30 UTC
a8ab1f8caf	chore(deps): update build (#15918) Author: renovate[bot]	Nov 05, 2026 08:27 UTC
a0d1388773	chore(deps): update dependency minimatch to v11 [security] (#16145) Author: renovate[bot]	Nov 05, 2026 08:26 UTC
923f70d0a0	fix(deps): update compiler (#15920) Author: renovate[bot]	Nov 05, 2026 08:24 UTC
3cb116122f	chore(deps): update lint (#15921) Author: renovate[bot]	Nov 05, 2026 08:24 UTC

Commit	Message / author	Committed (UTC)
0ce9e1622c	chore(deps): update dawidd6/action-download-artifact action to v28 (#16086) Author: renovate[bot]	Nov 05, 2026 08:24 UTC

Maintenance-health assessment

Methodology: maintenance-v1. This is a maintenance-signal heuristic, not an objective source-code quality, correctness, or security score.

Maintenance-signal score: 84/100. All six factors assessed.

Factor	Points / weight	Explanation
Default-branch commit recency	25 / 25	Observed activity is 3.94 days old (rounded); exact elapsed-time bands award 25/25.
README availability	15 / 15	GitHub reports a nonempty README (2741 bytes).
License availability	10 / 10	GitHub detected MIT License (SPDX: MIT).
Stable GitHub release recency	15 / 15	Observed activity is 3.94 days old (rounded); exact elapsed-time bands award 15/15.
Issue acknowledgement (sample)	4 / 20	1/5 sampled mature issues received a qualifying acknowledgement within 7 days; round-half-up awards 4/20. This sample is not all issues.
Merged pull-request recency	15 / 15	Merge recency established from a bounded, update-ordered closed-PR sample. Observed activity is 0.03 days old (rounded); exact elapsed-time bands award 15/15.

Default-branch commit recency rule: Age of the default-branch tip commit (committer timestamp): <=7 days: 25; <=30: 20; <=90: 10; <=180: 5; older or a confirmed empty repository: 0.

README availability rule: A README reported by GitHub with size >0 bytes: 15; a confirmed missing or empty README: 0. Contents and documentation quality are not judged.

License availability rule: A detected license with a recognized SPDX identifier: 10; a detected custom/unrecognized license: 5; GitHub explicitly reports no detected license: 0. This is not legal advice or proof of licensing adequacy.

Stable GitHub release recency rule: Publication age from GitHub latest stable release endpoint: <=90 days: 15; <=180: 10; <=365: 5; older or no stable GitHub release: 0. Tags, prereleases, and releases on other channels are not assessed.

Issue acknowledgement (sample) rule: Among up to 5 newest issues at least 7 days old found in the first 300 newest raw issue items across at most 3 pages (PRs excluded), require at least 3 assessable issues. Award round-half-up(20 x acknowledged/sample). Acknowledgement means a comment within 7 days by a different account whose GitHub author_association is OWNER, MEMBER, or COLLABORATOR. Inspect at most the first 100 comments per issue. Associated automation can count; reply helpfulness and repository-wide responsiveness are not measured.

Merged pull-request recency rule: Age of the latest provable merged_at timestamp: <=30 days: 15; <=90: 10; <=180: 5; older or a fully exhausted closed-PR list with no merges: 0. Inspect at most 100 recently updated closed PRs. If more pages exist, recency is assessable only when the newest observed merge is at least as recent as the oldest loaded updated_at; unseen older-updated pages cannot then contain a newer merge.

Maintenance suggestion: Review the sampled issues, acknowledge support requests within a week, or clearly document support expectations. Useful replies matter more than optimizing this proxy.

This is an explainable maintenance-signal heuristic, not an objective source-code quality, security, or correctness score.

Weights and time bands are product choices, not a validated industry benchmark.

Stable, mature, archived, or direct-commit projects can legitimately have little recent activity. Interpret the result against project goals.

README and license checks measure detection only. Other documentation, licensing terms, and external release channels are not evaluated.

Issue acknowledgement is a small sample and an account-association proxy; automation can count, and useful support is not judged.

A missing factor is never assigned zero or reweighted. Incomplete assessments have no overall score; bounds are possibilities, not estimates.
